
Early Identification of Individuals with HIV/AIDS

Prepared for Data Presentation: September 19, 2025

Objectives

- Become familiar with EIIHA data and know its purpose
- Understand the impact on collaboration with other Ryan White parts and prevention
- Recognize your role in EIIHA and its impact on future funding

What is EIIHA?

- Early Identification of Individuals living with HIV/AIDS
- A strategy introduced by HRSA in September 2009
- Its purpose is to ensure all people know their status, whether it's positive or negative
- It also outlines the need to develop a strategy to bring people with HIV into care
- **EIIHA scope: the Eligible Metropolitan Area (EMA), which consists of Orange, Osceola, Seminole, and Lake Counties**

EIIHA Strategy

The four components:

1. **Testing:**
   - Traditional and rapid testing
2. **Counseling:**
   - Pre and post counseling, regardless of test result
3. **Referrals:**
   - Referring individuals to appropriate services and verifying that services were accessed
4. **Linkage:**
   - Linking individuals to medical care

EIIHA vs Unmet Need

- **EIIHA:** A person with HIV who is UNAWARE of their status and not in primary medical care.
- **Unaware of HIV Status:** Any person who has NOT been tested for HIV in the past 12-months.
- **Unmet Need:** A person with HIV who is AWARE of their status but not in primary medical care.

Knowing your HIV Status

- The most important piece to the EIIHA puzzle is increasing the number of people being tested at least once every 12 months
- Two-fold outcome from this component:
  1. Increase the number of people who know their status
  2. Increase the number of people with HIV in care

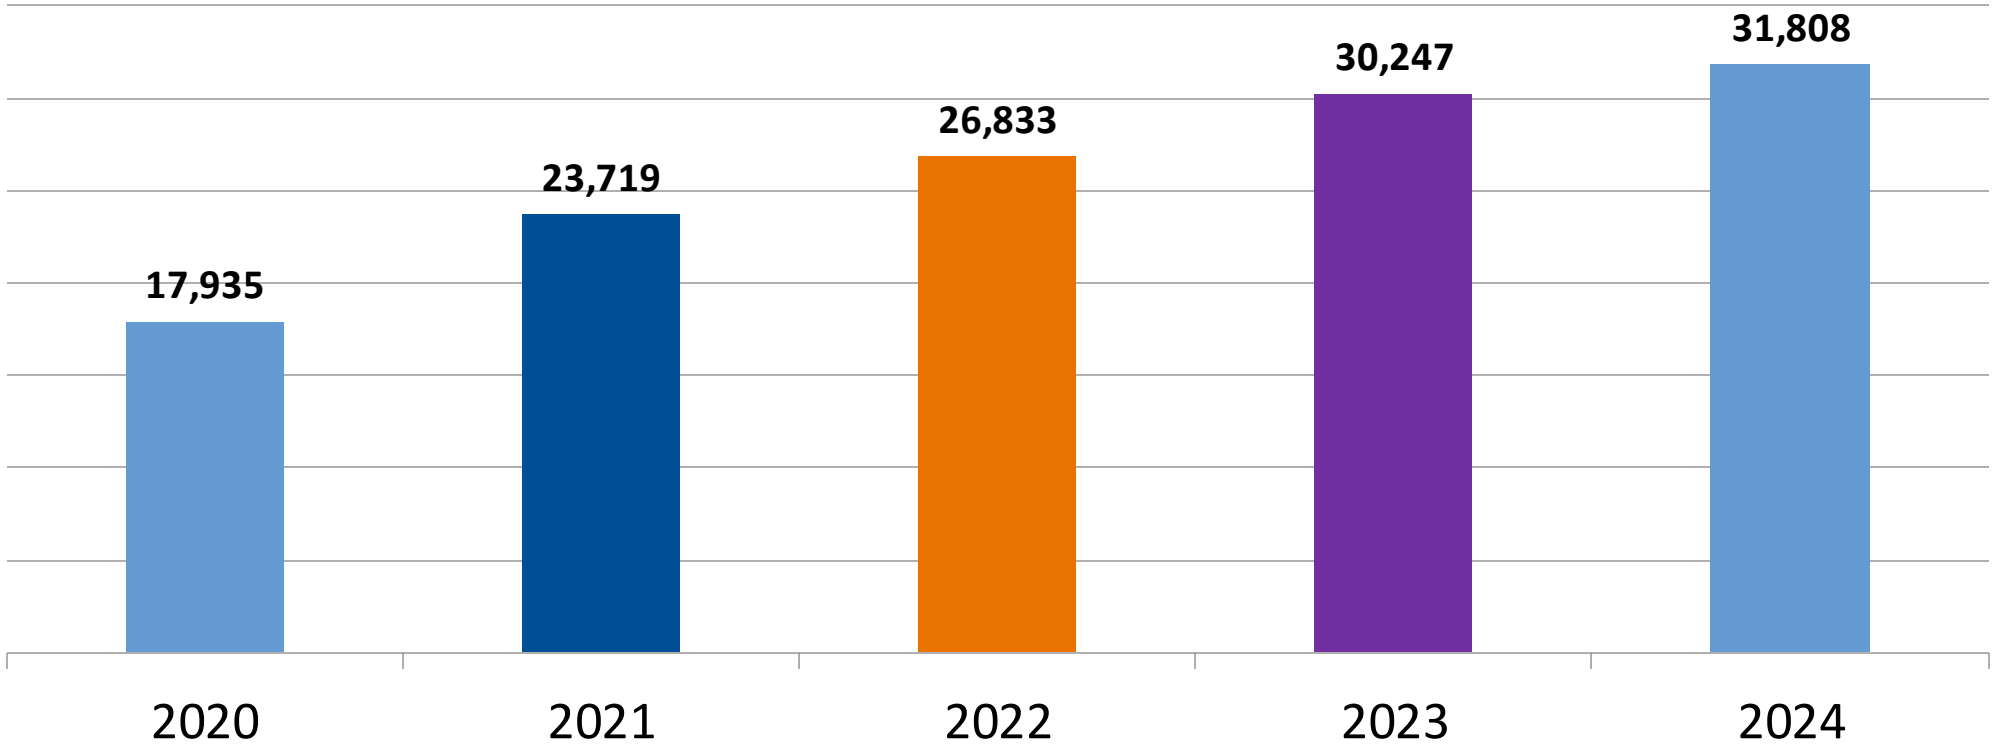
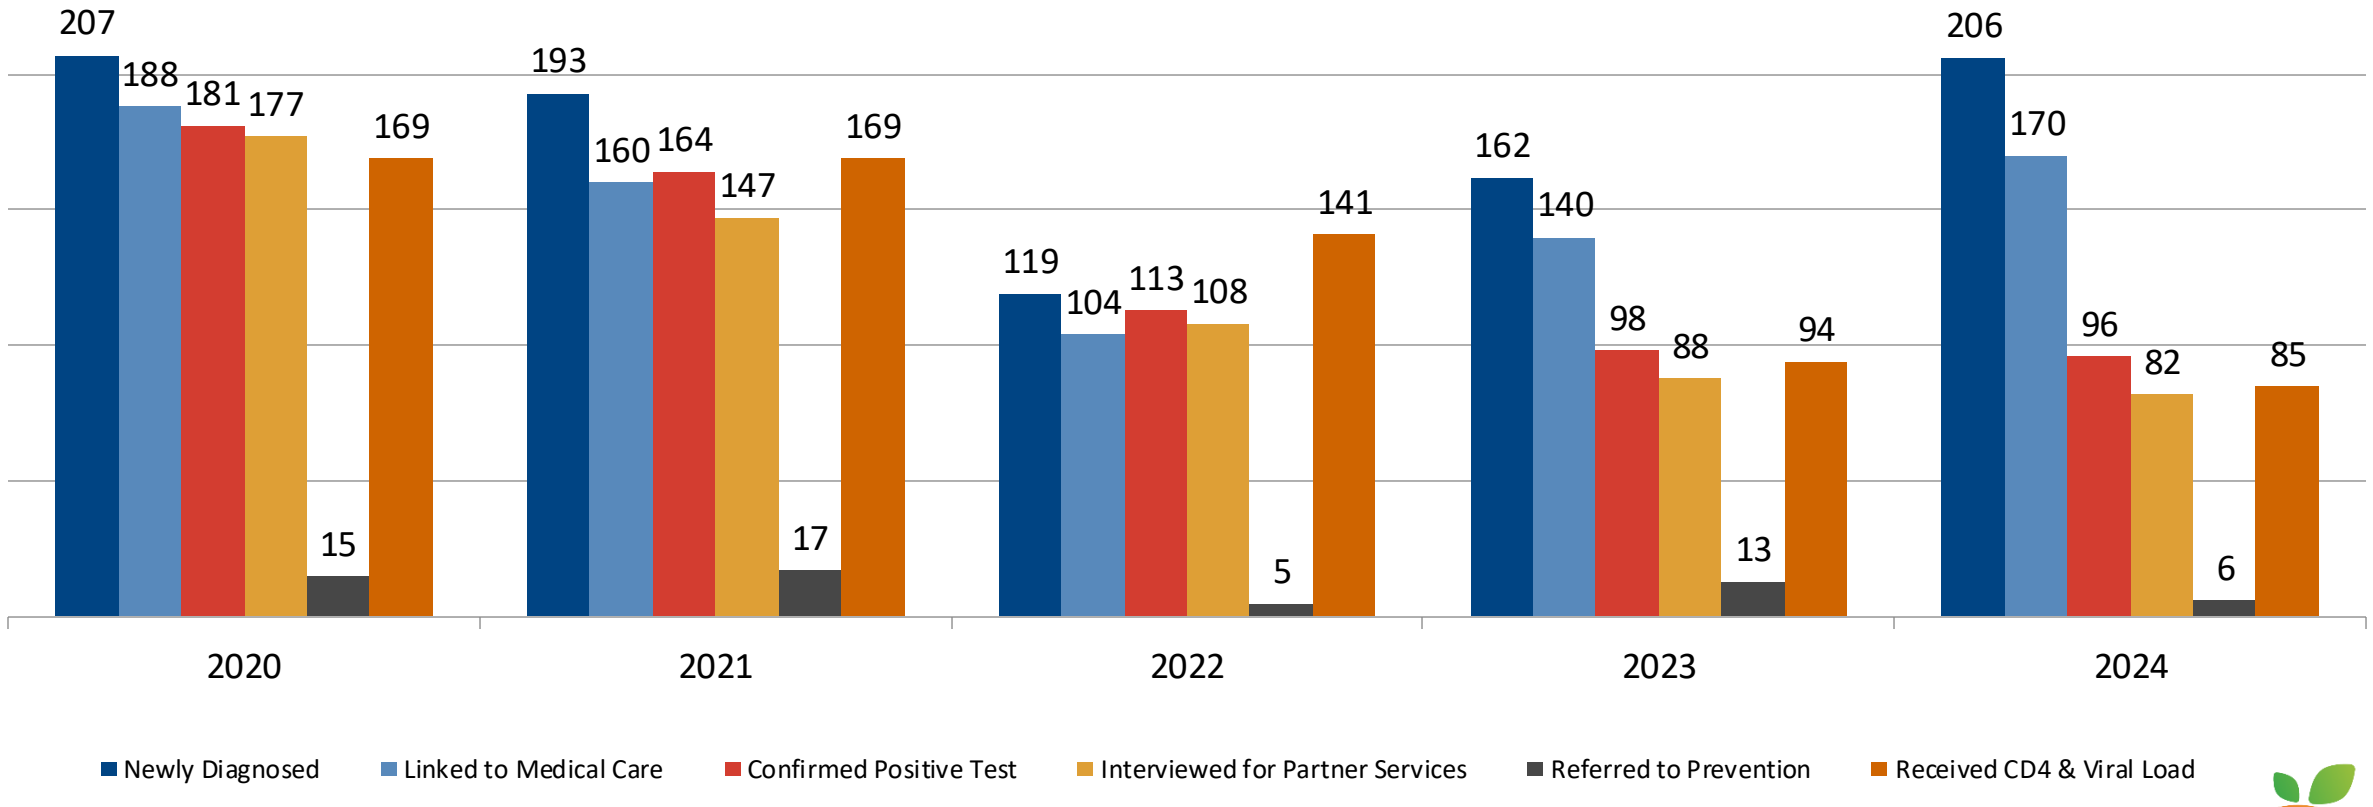
Total Tested in Eligible Metropolitan Area (EMA) Publicly funded testing events 2020-2024



Newly Diagnosed

EMA, 2020-2024



**Referrals to prevention services can include PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling& Testing system.*

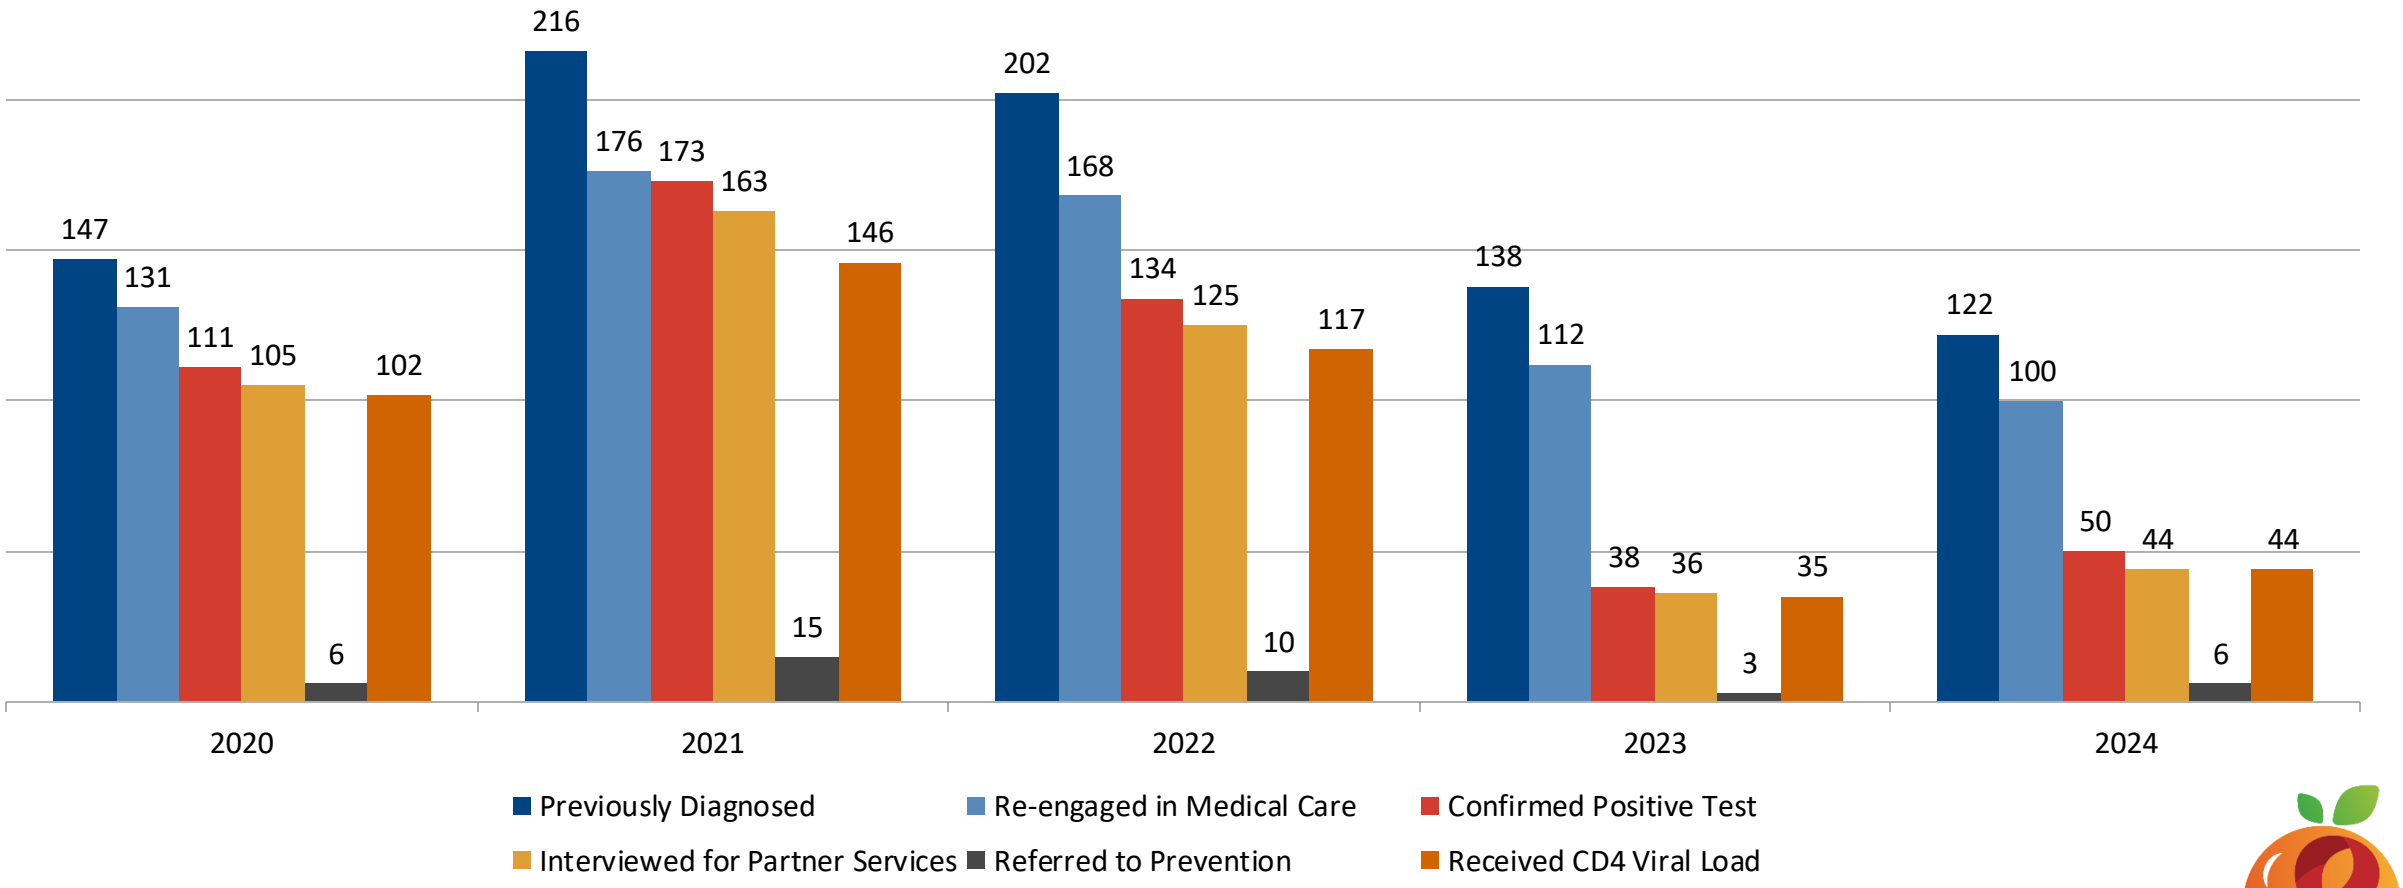
Newly Diagnosed Percentages

EMA, 2020-2024

	2020	2021	2022	2023	2024
Newly Diagnosed	207	193	119	162	206
Linked to Medical Care	91%	83%	87%	86%	83%
Confirmed Positive Test	87%	85%	95%	60%	47%
Interviewed for Partner Services	86%	76%	91%	54%	40%
Linked to Prevention Services	7%	9%	4%	8%	3%
Received CD4 Count & Viral Load Numbers	82%	73%	85%	58%	41%

Previously Diagnosed

EMA, 2020-2024



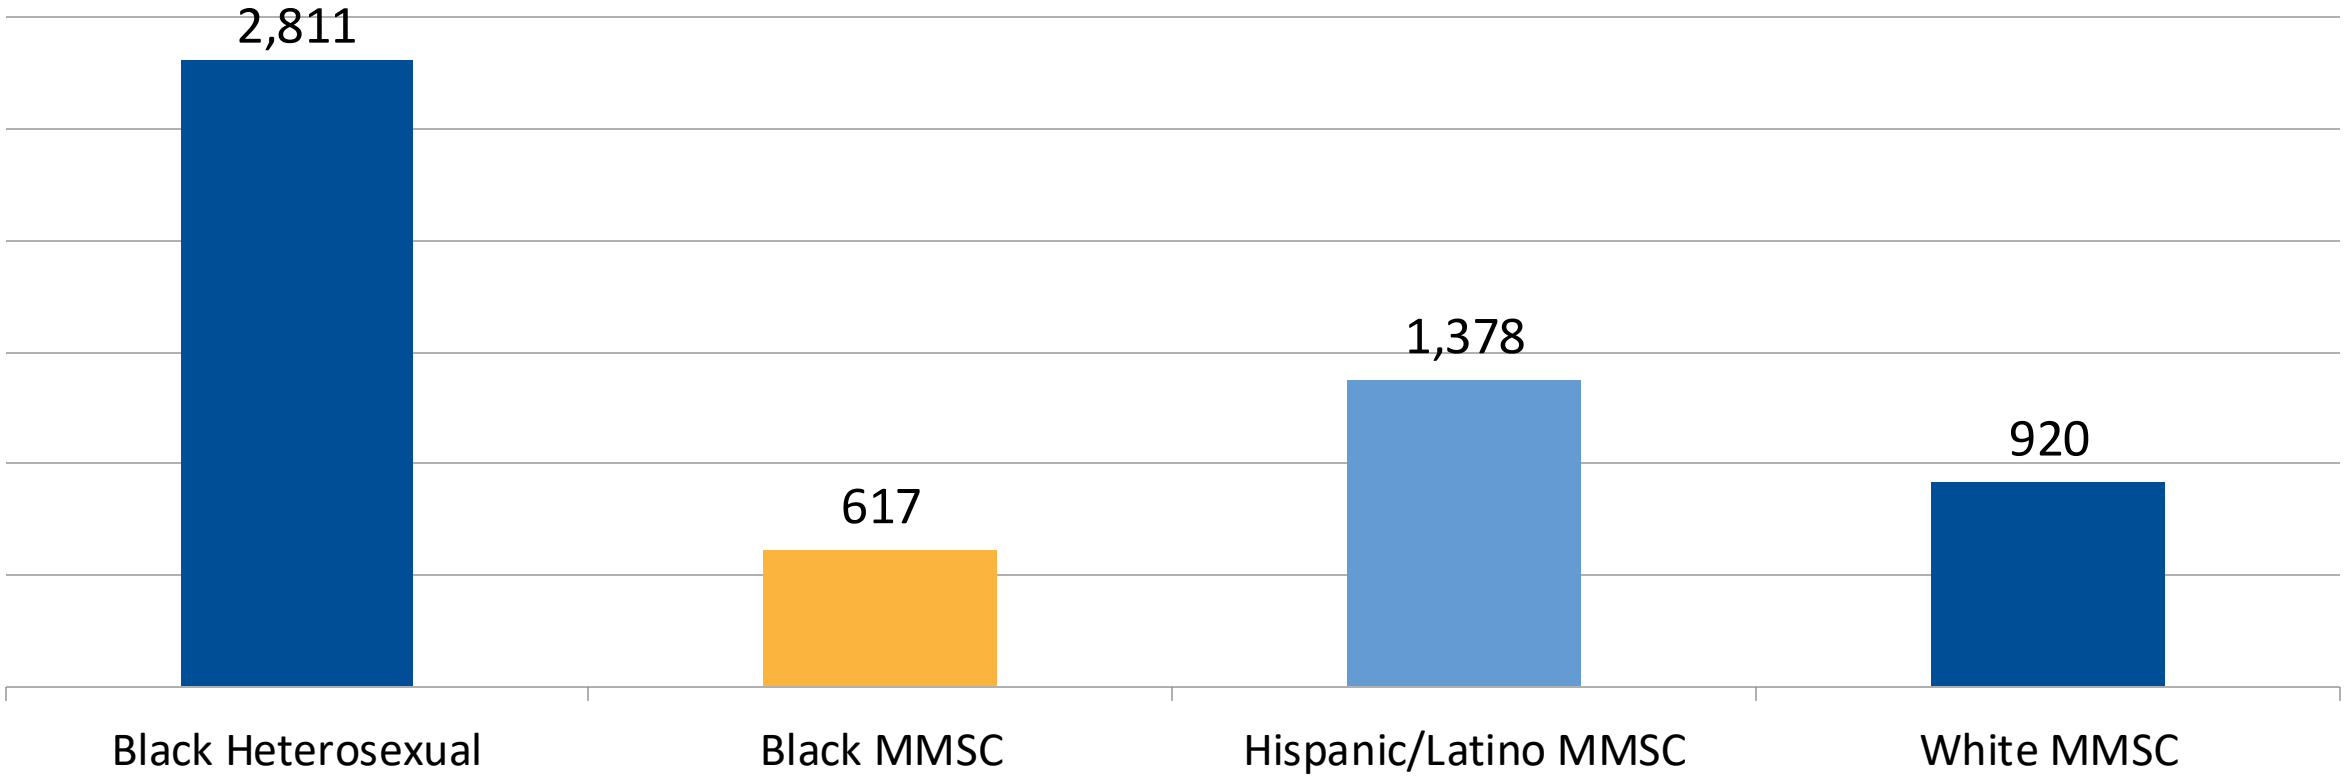
**Referrals to prevention services can include PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling & Testing system.*

Previously Diagnosed Percentages

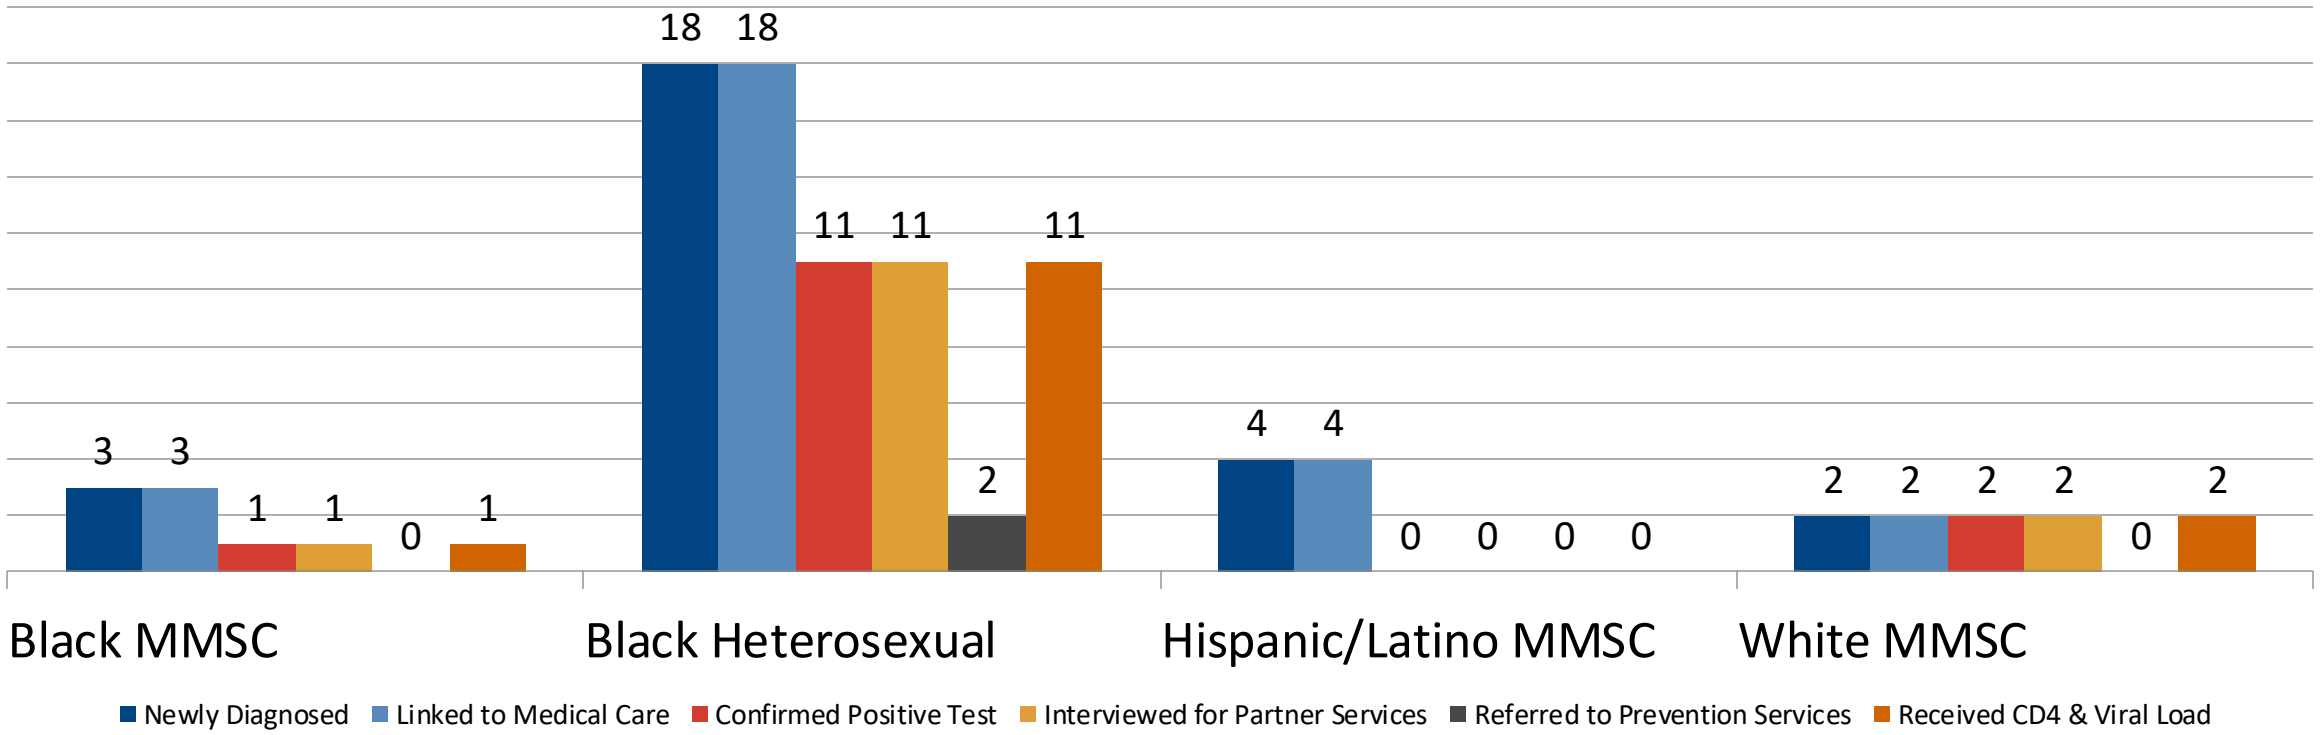
EMA, 2020-2024

	2020	2021	2022	2023	2024
Previously Diagnosed	147	216	202	138	122
Re-engaged in Medical Care	89%	81%	83%	81%	82%
Confirmed Positive Test	76%	80%	66%	28%	41%
Interviewed for Partner Services	71%	75%	62%	26%	36%
Linked to Prevention Services	4%	7%	5%	2%	5%
Received CD4 Count & Viral Load Numbers	69%	68%	58%	25%	36%

Populations of Focus, EMA
Publicly funded testing events in 2024



Newly Diagnosed Populations of Focus
EMA, 2024



**Referrals to prevention services can include PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling& Testing system.*

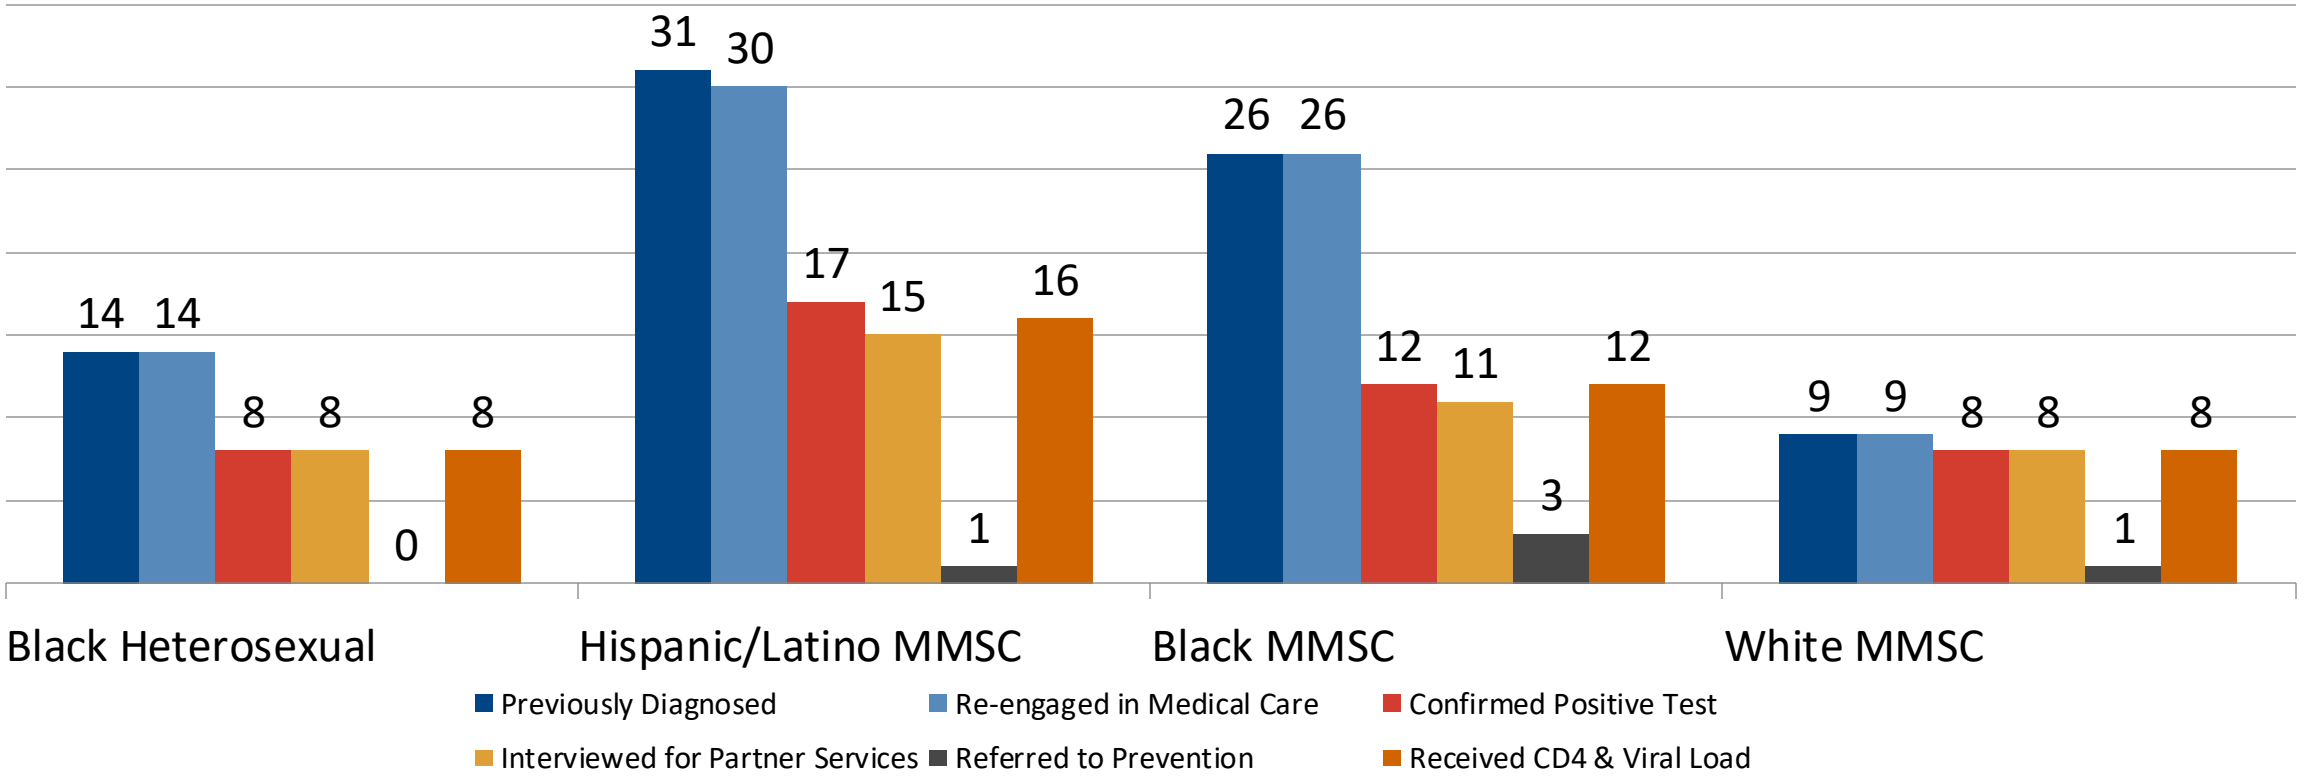
Newly Diagnosed Percentages

EMA, 2024

	Black Heterosexual	Latino MMSC	Black MMSC	White MMSC
Newly Diagnosed	18	4	3	2
Linked to Medical Care	100%	100%	100%	100%
Confirmed Positive Test	61%	0%	33%	100%
Interviewed for Partner Services	61%	0%	33%	100%
Linked to Prevention Services*	11%	0%	0%	0%
Received CD4 Count and Viral Load Numbers	61%	0%	33%	100%

**Referrals to prevention services can include things like PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling & Testing system.*

Previously Diagnosed Populations of Focus
EMA, 2024



**Referrals to prevention services can include PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling& Testing system.*

Previously Diagnosed Percentages

EMA, 2024

	Black Heterosexual	Latino MMSC	Black MMSC	White MMSC
Previously Diagnosed	14	31	26	9
Re-engaged in Medical Care	100%	97%	100%	100%
Confirmed Positive Test	57%	55%	46%	89%
Interviewed for Partner Services	57%	48%	42%	89%
Linked to Prevention Services	0%	3%	12%	11%
Received CD4 Count and Viral Load Numbers	57%	52%	46%	89%

**Referrals to prevention services can include PrEP, behavioral interventions, risk reduction counseling services, and medical services. If a newly diagnosed or previously diagnosed client went to a private provider for linkage and services, it might not get noted in the HIV Counseling & Testing system.*
